
Proactive Roof Programs

“Annual inspections, NTE repairs, and partner pricing for portfolio stability.”

About Hustad | Built on Relationships. Driven by Trust.

KPI snapshot (typical):

Leak response time: 24-72 hrs

**Response times depend on client program selection*

Inspection → proposal: 1.7 days

On-time completion: 98.3%

Punch-list closeout: 2.4 days

Rolling 12-month medians; portfolio-wide.

- 50+ years in business serving national ownership and operators
- National reach, local accountability with onsite supervision and clear communication
- Programs that protect NOI through inspection cadence, NTE repairs, and predictable scheduling
- Documentation first with daily photos, time stamped reports, and portal visibility
- Manufacturer certified for warranty compliant specifications and installations
- Multi-year MSAs with portfolio clients across multifamily, student, senior living, and retail
- Occupied site expertise focused on safety, clean sites, tenant coordination, and schedule integrity

Our Value to Ownership

- **Convert** roof risk into protected NOI with programs.
- **Documented** maintenance keeps warranties valid and defensible.
- **NTE** repairs reduce emergencies and repeat mobilizations.
- **Portfolio** portal: R/Y/G status, spend, forecasts in one place.
- **Occupied** site execution: safety, communication, clean, on-schedule.

“Portal reporting and photos create defensible records.”

Specialized Service Programs

Comprehensive inspection programs: annual maintenance reviews, storm-readiness assessments, and acquisition or disposition reports that support asset management, underwriting, and long-term capital planning.

Transparent digital portal for reports: proposals, budgets, and live progress photos

Emergency Response & Storm Recovery: 24/7 mobilization in 46 states

MSA Partnerships: Established master service agreements with national and regional ownership groups, enabling streamlined onboarding, standardized pricing, and consistent inspection, repair, and restoration services across entire portfolios.

“Annual and biannual inspections, NTE repairs, and portfolio reporting.”

The Case for Annual Inspections and Preventative Maintenance

- **Protect warranty coverage with documented maintenance and inspections.**
- **Provide verifiable records for carriers and manufacturers.**
- **Extend roof service life through proactive care.**
- **Reduce leaks and avoid interior damage costs.**
- **Minimize emergencies and stabilize OpEx and NOI.**
- **Support tenant satisfaction with cleaner, safer sites.**

Budget Planning Framework | Translating Data into Action

Industry findings (Firestone/ProLogis study)

- Proactive programs average \$0.14/ft²/yr; reactive about \$0.25/ft²/yr
- Proactive roofs average 21 years vs 13 years reactive — +8 years (~60% longer)

Metric	Proactive	Reactive	Impact
Annual maintenance (\$/ft ² /yr)	\$0.14	\$0.25	Lower run-rate
Average service life (years)	21	13	+8 yrs (~60%)
20-yr maintenance total (per ft ²)	\$2.80	\$5.00	Savings compound
Replacement timing (example)	Later (≥ Year 21)	Earlier (~Year 13)	Defers CapEx

*Example replacement cost ≈ \$12/ft²; local bids vary

- **Conservative:** \$0.04–\$0.06 (inspection + minor touchups)
- **Recommended:** \$0.12–\$0.18 (twice-yearly + routine repairs)
- **Intensive/complex:** \$0.20–\$0.30 (more visits, penetrations, harsh climates)

Roof Warranty Misconceptions

What a warranty covers

- Coverage is limited to defined manufacturing defects and approved workmanship items
- A warranty is not a guarantee of a leak-free roof in all conditions

What is typically excluded

- Damage from lack of maintenance or other trades
- Weather events outside tested parameters
- Items listed as owner maintenance

Are non-leaking deficiencies covered

- Usually no. Lifted seams, loose flashing, and sealant deterioration are maintenance items
- Correcting these items proactively helps maintain warranty validity and prevents escalation

Does a warranty cover interior damage

- Generally no. Warranties cover the roof assembly only
- Interior finishes and tenant contents are typically an insurance matter

Key takeaway

- Routine inspections and documented owner maintenance are required to keep coverage in force

“Maintenance and documentation are required to keep coverage valid.”

Warranty Types and Owner Responsibilities

System warranty

- Covers membrane and approved installation workmanship
- Issued through the manufacturer and a certified contractor
- Broader coverage with longer terms

Membrane-only warranty

- Covers the roofing material against manufacturing defects
- Does not include labor, flashing, or workmanship items

Owner responsibilities to keep coverage valid

- Maintain an inspection cadence and complete minor repairs
- Keep photo records and reports in a central portal
- Follow manufacturer maintenance guidelines and register warranty documents
- Report issues promptly and use certified contractors for repairs

“A warranty is only as strong as the maintenance and documentation behind it.”

Common Roof Deficiencies & Owner Maintenance Responsibilities

Typical Annual Maintenance & Repair Items

Sealant deterioration at pipe boots, vents, and wall flashings

Loose or missing fasteners on edge metal, coping, or equipment curbs

Debris accumulation at drains, scuppers, and gutters restricting flow

Minor shingle, tile, or membrane punctures from trades or rooftop traffic

HVAC or plumbing penetration leaks caused by service technicians

Minor separation or lifting of seams and flashings

Deterioration of mastic, caulking, and temporary patches

Cracked or damaged drain bowls and strainers

Gutter and downspout obstructions from tree debris or sediment buildup

Ponding water from low-slope irregularities or compressed insulation

Items Typically Considered “Owner Maintenance” by Manufacturers

- Debris removal from roof surface and drainage systems
- Replacement of deteriorated sealant, caulk, or pitch pans
- Tightening or replacing exposed fasteners
- Cleaning of gutters, scuppers, and downspouts
- Repair of rooftop damage caused by third-party trades
- Maintaining records of all inspections and repairs performed

Low-Slope Roof Inspection & Maintenance Plan Options

Plan Tier	Good	Better	Best
Purpose	Entry-level plan to maintain warranty compliance and document roof condition	Balanced program combining inspection, documentation, and proactive repair work	Comprehensive preventative program for long-term asset protection and NOI stability
Inspection Frequency	Annual inspection	Biannual (Spring & Fall) inspections	Quarterly inspections (or customized schedule for high-value assets)
Documentation	Full written report with annotated photos	Report, condition grading, and 10-year forecast	All reporting from “Better” + digital client portal access and cloud archive
Maintenance Scope	Minor debris removal, basic sealant touch-ups, a la cart pricing	Minor repairs (seams, flashings, drains), small leak response with no trip charge, a la cart pricing w 5% discount above NTE	Full preventive maintenance: seam reinforcement, flashing rework, drain cleaning, minor coating touch-ups, a la cart pricing w 10% discount above NTE
Emergency Response	On-call, priority scheduling	48-hour response for leak calls	24-hour guaranteed response with priority dispatch
NTE (Not-to-Exceed) Limit	\$0.03-\$0.05/ft ² /yr	\$0.12-\$0.18/ft ² /yr	\$0.20-\$0.30/ft ² /yr
Added Value	Protects manufacturer warranty	Reduces risk of early failure, builds claim defensibility	Extends roof life by 5–10+ years, stabilizes NOI, and reduces CapEx volatility
Ideal For	Properties meeting warranty requirements	Portfolios seeking predictable maintenance budgets	Institutional owners prioritizing long-term performance and documentation control

“Low-slope services priced per square foot.”

Steep-Slope Roof Inspection & Maintenance Plan Options

Plan Tier	Good	Better	Best
Purpose	Essential plan for maintaining warranty and verifying roof condition annually	Proactive plan balancing inspection, documentation, and scheduled cleaning/repairs	Full-service maintenance and protection program designed for long-term performance and NOI stability
Inspection Frequency	Annual inspection per building	Spring & Fall inspections	Quarterly inspections (or custom schedule for high-risk or large sites)
Documentation	Written condition report with photo summary	Detailed report with photo annotations and site condition scoring	Full digital report with portal access, year-over-year tracking, and budget forecasting
Maintenance Scope	Visual inspection, minor debris and isolated gutter cleaning, a la cart pricing	Includes full gutter cleaning, sealant touch-ups, minor flashing repairs, a la cart pricing w 5% discount above NTE	Includes full roof and gutter cleaning, minor shingle repairs, flashing repairs, sealant renewal, a la cart pricing w 10% discount above NTE
Emergency Response	On-call service; standard scheduling	Priority scheduling for leak response	24-hour response with priority dispatch
NTE (Not-to-Exceed) Authorization	\$250 per building	\$350 per building	\$500 per building (allows proactive small repairs during inspections)
Added Value	Maintains manufacturer warranty and documents roof condition	Reduces leak risk, improves appearance, and extends service life	Maximizes performance, minimizes risk, and preserves NOI through proactive, portfolio-wide protection
Ideal For	Small or lower-risk communities	Mid-size portfolios focused on resident satisfaction and risk reduction	Large apartment or HOA portfolios with long-term ownership objectives

A La Carte Service Menu | Discounted Partnership Pricing for Common Roof Deficiencies

- Partnership/MSA clients save 25–40% versus reactive service rates.
- Transparent pricing allows same-day authorization for small repairs during inspections.
- All work includes before-and-after documentation uploaded to the client portal.
- Keeps manufacturer warranties intact and builds a verifiable maintenance record.
- Reduces the long-term “drag” on NOI caused by emergency calls and interior repairs.

Common Deficiency Type	Proactive Partnership Rate	Reactive / Emergency Rate	Description / Impact if Ignored
Pipe boot or vent seal replacement	\$375 – \$450	\$500 – \$700	Prevents active leaks at penetrations — most common failure point on multifamily roofs.
Exposed fastener reseal or replacement	\$200 – \$350	\$250 – \$450	Fasteners loosen with thermal movement; resealing avoids blow-offs and leaks.
Missing shingles or tile (small area)	\$275 – \$500	\$500 – \$850	Stops water intrusion and underlayment deterioration; extends system life.
Minor flashing or wall tie-in repair	\$300 – \$600	\$375 – \$750	Addresses leaks at transitions and wall details; prevents structural rot.
Sealant or caulking renewal	\$200 – \$350	\$250 – \$450	Sealants typically last 3–7 years — regular renewal is required by manufacturers.
Gutter and downspout cleaning	\$200 – \$350	\$250 – \$500	Removes blockages that cause ponding or overflow damage to fascia and walls.
Commercial flat roof patch (minor membrane repair)	\$350 – \$600	\$550 – \$1,000	Repairs punctures, seams, or small splits that can lead to saturated insulation.
Skylight or curb reseal	\$250 – \$400	\$325 – \$600	Stops perimeter leaks — critical at aging skylights or RTU curbs.

NOI Protection Funnel | From Documentation to Budget Stability

How inspections, documentation, and proactive NTE repairs convert roof risk into predictable OpEx and protected NOI

Inspection & Photos

Verified condition, warranty checkpoints, time stamped imagery

Documentation & Portal

Single source of truth by property with history and trends

Insurance Credibility

Defensible claims and faster resolution with clear records

Proactive Repairs (NTE)

Resolve small items in one visit; fewer emergencies and call-backs

Budget Stability & NOI

Predictable spend, extended service life, less interior damage

Why it protects NOI

- Maintenance is cheaper than replacement; delaying major events drives lifetime savings
- Documentation keeps warranties valid and supports claim approvals
- NTE repairs prevent repeat mobilizations and interior damage
- Portfolio reporting enables forecasting and smarter CapEx timing

Technology Advantage

- Client portal with real-time status and site history
- Daily photos, time-stamped notes, and safety checklists
- Storm tracking, automated alerts, and rapid dispatch
- R/Y/G portfolio dashboards and deficiency tracking
- Budget forecasting and CapEx planning exports
- Warranty document storage and audit-ready records

Certified by leading manufacturers for warranty-compliant installation and documentation.

Proven Partnerships. Proven Results.

Relationships built on trust, communication, and consistent delivery — project after project.

“From a denied claim to full replacements, Hustad advocated effectively, executed quickly, and supported our team with detailed reporting and software access.”

Santiago Quiroz Jr, Senior Vice President, Facilities and Construction | Campus Life and Style

“An outstanding resource across thousands of units. Hustad met aggressive schedules, minimized disruption, and delivered a great finished product.”

Senior Leadership Team, | Cardinal Group

“A full-service partner for storm events and restorations. Hustad handled inspections, claim negotiation, and restoration with consistent communication.”

Ted Lowndes, President | Dial Retirement Communities

“Hustad Companies has proven to be a reliable national partner, consistently delivering quality, communication, and professionalism across multiple states and asset types.”

Stacey Lecoche, Executive Vice President | Asset Living

“As the owner and manager of the privatized housing community at Offutt Air Force Base, I am pleased to offer this letter of appreciation. The positive experience that we have had with the Hustad team is testimony to your company's professionalism and commitment to ensure a successful project.”

Dominic Vaccaro, President | Burlington Capital

Limited-Time Commercial Terms | Book & Save

Incentives

- 10% discount on orders over \$50k placed by [date]
- 0% interest for 3–6 months on orders over \$25k
- Reserve crew capacity now. Schedule before or after the new year as needed

Partner economics

- MSA clients receive preferred rates. Typical savings 25–40% vs reactive service
- Low-slope services priced per square foot
- Steep-slope services priced per building. Very large buildings can convert to per square foot

How to proceed

- Send property list and warranty info
- Select tier by site and approve the NTE level
- Confirm the first inspection window and primary contacts

How to Start | Checklist

Next Steps | Getting Started

Three-week pilot timeline

- Week 1: Kickoff call, data exchange, site access confirmed
- Week 2: On-site inspections, same-day photos and notes in the portal
- Week 3: Pilot review with findings, NTE repairs completed, plan recommendations

Decision options

- Extend cadence portfolio-wide
- Add A La Carte services where needed
- Schedule restorative work or plan CapEx phasing

Ownership visibility

- KPI snapshot: inspection to proposal days, on-time completion rate, punch-list closeout
- Portfolio rollup available for asset and finance teams

Thank you for your time and partnership
